## Charlotte's Parkview Elementary Gets Wacky About Science

*The Wacky Science Show recently came to Parkview Elementary School giving students an enjoyable experience while learning about the scientific method. This is the only show to ever win Dow Chemical's Touch-Tech Award for excellence in hands-on science education.*

*Students cheered at the crazy antics of Mr. Science who transformed everyday household objects into scientific experiments. Volunteers from the audience became stinky dinosaurs, simple machines, types of scientists, and used the steps of the scientific process to make predictions and hypothesize about the outcome of chemical reactions of solids and liquids.*

*Parkview Elementary School continues to advance their students' level of knowledge of science through the support of the Parent/Teacher Organization by sponsoring this program with a combination of surprises and comedy. It was the perfect complement to our classroom instruction and made learning science a fun experience.*
