

PROGRAMS

Infants (6 weeks-18 months)

Individualized schedules and planning for each child provides a variety of learning experiences for all of the changes which take place during a baby's first year. Low adult-to-child ratios provide more attention to the individual needs of each baby and allow for more one on one time throughout the day.

Toddlers (18-36 months)

Our toddler program provides a variety of fun learning activities planned to help children solve, predict, plan, share, cooperate, empathize, and learn to understand their world. Positive self esteem and self help skills are promoted. A low adult to child ratio allows for more individualized attention.
