## **Little Bits Enhance Learning**

The Dart Foundation recently awarded Parkview Elementary School a grant to purchase a classroom set of Little Bits Building and Coding Blocks. These Little Bits make it easy for students to engage in design and modeling using a block style piece combined with electrical circuits to build a programmable device. The kits contain parts that are stored in an organized wall mount and the pieces snap together with ease with no tool required. Elementary students are able to increase their math skills dramatically in a fun and engaging way thanks to the continued generosity of the Dart Foundation.
